

MPEP PRO

BASIC (Necessary)

0€

/ANNUAL

- ✓ Basic medical check-up with a full medical interview and screening for adaptive disorders.
- ✓ Physical examination by systems and resting electrocardiogram.
- ✓ Certification of fitness for sports practice.

[MORE INFORMATION](#)

EXPANDED

450€

/ANNUAL

- ✓ Extended medical check-up with a medical interview and screening for adaptive disorders.
- ✓ Physical examination and visual acuity assessment.
- ✓ Certification of fitness for sports practice.
- ✓ Screening for cardiovascular pathology with electrocardiogram and stress test. Complemented with bioimpedance study and functional analysis.
- ✓ Screening for gait abnormalities and issuance of medical report and functional study.

[MORE INFORMATION](#)

PREMIUM

1.195€

/ANNUAL

- ✓ Extended medical check-up with a medical interview and screening for emotional disorders.
- ✓ Physical examination and visual acuity assessment.
- ✓ Certification of fitness for sports practice.
- ✓ Screening for cardiovascular pathology with electrocardiogram and stress test. Complemented with bioimpedance study and structural, functional, strength, and running mechanics analysis with load distribution study, including screening for gait abnormalities.
- ✓ Visit with a nutritionist complemented with anthropometric fold study and blood analysis.
- ✓ Issuance of medical report, structural study, personalized supplementation guideline, and individualized preventive training plan.

Descriptive
Basic medical check-up with a full medical interview and physical examination using devices. Emotional anamnesis for screening of adaptive disorders.
Ophthalmological examination for screening visual acuity defects.
Resting electrocardiogram for screening the main causes of sudden death
Ergometry for screening cardiac disorders that may limit sports performance.
Blood analysis for screening hypovitaminosis and monitoring hormonal profile.
Body composition evaluation using bioimpedance
Structural evaluation assisted by bioimpedance and thermal analysis for screening structural-functional asymmetries.
Load distribution study and gait mechanics for detecting movement asymmetries.
Analytical and functional tests aimed at determining structural-functional limitations for screening various risk factors for injury and addressing them through the assistance of different fields within the health sector.
Tests of variables associated with speed, power, and velocity, using NeuroExcellence technology, to address potential performance deficits and enhance strengths through areas such as physical training, physiotherapy, and/or nutrition.
Visit with a nutritionist for screening bad habits, assisted by an anthropometric study for a better understanding and comprehensive view of physical condition.
Certification of fitness for sports practice and processing of federative card and visa, if required.
Medical diagnostic report and functional evaluation complemented with bioimpedance.
Exhaustive structural and functional evaluation report.
Delivery of individualized preventive training guideline with recommendations for the improvement of motor control. Delivery of supplementation guideline, if required, and individualized dietary recommendations.
